

BMW Canada Inc. 2015 Product Planning Bulletin

The All-New MY2016 M2 Coupé.

BMW Canada is pleased to announce the all-new MY16 BMW M2 Coupé (F87). Set to make its World debut at the Detroit Auto Show in January, the BMW M2 has been the subject of overwhelming speculation and excitement among car enthusiasts all over the world. Starting April 16, 2016 customers will finally have the opportunity to experience the latest offering from BMW M with production for Canada beginning 02/16.

This exciting new model exemplifies the true meaning of M and serves as a tribute to BMW legends past and present. Succeeding the 1M Coupé, the all-new BMW M2 is guided by the same philosophy that spawned one of the most iconic M vehicles in recent history. Building upon the highly capable chassis of the BMW M235i, the engineers at BMW M were able to combine classic sports car proportions with unmistakable M design and performance hallmarks to create yet another high performance automobile truly worthy of the M badge.

Design – Inspired by Icons

A glance at any angle of the all-new BMW M2 reveals characteristic M design features. For the M2 inspiration was mainly drawn from the BMW 3.0 CSL touring car racer and the iconic 2002. The signature BMW kidney grille, with its black-painted double bars and the three-dimensional design, mimics the aggressive front end rake of iconic BMW vehicles of the past. The large front apron with trapezoidal blades and the Air Curtains in the outer air intakes mimic protruding spoilers that have been a familiar sight in motorsport over the years. However, function is not lost on the form of these design elements. The re-sculpted front end reduces drag by 5% and lift by 35% compared to the M235i. Around the vehicle, a newly sculpted rear bumper echoes memories of the 3.0 CSL while the aggressively widened fenders (+53mm front, +78mm rear) accentuate the significantly wider track of the M2. More BMW M design hallmarks are evident all over the vehicle with a quad exhaust pipe setup at the rear and unmistakable M side gills flanking the front wheel arches. Along with 19" Double-Spoke M wheels, the design features of the all new BMW M2 come together to form one of the most visually potent vehicles in the BMW M portfolio. From its striking front and rear fascias to its aggressively widened stance, the all-new BMW M2 presents an emphatic message of power, agility, and performance as it confidently carries forward the legacy left behind by the 1M Coupé.

2015 Product Planning Bulletin

Powertrain - New M TwinPower Turbo

The all-new M2 introduces a newly developed M powertrain. This 3.0 liter inline 6 cylinder features M TwinPower Turbo technology, high-precision direct injection, VALVETRONIC variable-valve timing and Double-VANOS continuously variable camshaft timing. Optimized to meet the high performance requirements of a track-ready vehicle, the engine in the all-new M2 receives select components from the M3 and M4. Pistons, crankshaft bearings, and sparkplugs all receive upgrades to ensure the M2 easily maintains peak performance lap after lap. To further reinforce its track capability, the M2 also features upgrades to its oil-sump and radiator to ensure fluids remain stable and cool under prolonged extreme driving conditions.

Powertrain - Manual or DCT Transmission

Here, the all-new M2 draws once again from its M counterparts. Taken directly from the M3 and M4, the standard M 6-speed manual transmission uses carbon friction linings in its synchronizer rings to increase shift comfort and precision and a dry-sump setup ensures proper gear lubrication during extreme driving conditions. This transmission also features auto rev-match technology which allows for worry-free execution of downshifts as engine speed is automatically matched to transmission speed, ensuring rear-end stability and weight transfer under hard braking.

Alternatively, the new 2 can be equipped with the 7-speed M Double-Clutch Transmission with Drivelogic. Capable of changing gears automatically, this gearbox also allows ultra-fast gear changes in manual mode with no interruption of the power delivery. It is also fitted with a launch control functionality that optimizes traction when accelerating from a standstill. Shift speed and aggression are configured using the vehicle's three driving modes (COMFORT, SPORT and SPORT+) and range from imperceptible shifts in traffic to hard, lightning-quick shifts at the track.

The M2 is capable accelerating from 0-100 km/h in 4.5 seconds with the standard M 6-speed manual transmission and an even more impressive 4.3 seconds with the optional M DCT.

2015 Product Planning Bulletin

Chassis - Suspension, Steering, Differential

As with the engine and transmissions, the all-new M2 adopts the very best chassis components from the M3 and M4. The M2 uses a double-joint spring-strut front axle with control arms, wheel carriers and axle subframes constructed from aluminum to save weight. An aluminum stiffening plate helps to increase the rigidity of the front end. At the rear, a new five-link rear axle is used. Here, the control arms and wheel carriers are made of forged aluminum to reduce the unsprung weight of the rear end. The electromechanical steering rack from the M3 and M4 is also brought over and specifically tuned for the shorter wheelbase of the M2. It provides direct feel and precise feedback, complementing the agile handling characteristics of the M2. A standard Servotronic system adjusts the level of assistance based on the car's speed, providing optimum steering characteristics in all driving situations. The steering can be adjusted through the vehicle's three driving modes (COMFORT, SPORT and SPORT+). Finally, the M2 features the traction and stability optimizing Active M Differential from the M3 and M4. 0 to 100% lock requires only a fraction of a second and maximizes forward drive in slippery conditions or during a brutal changes of direction.

Chassis - Tires, Wheels, Brakes

The M2 is fitted with specially developed Michelin Pilot Super Sport tires wrapped around 19" double-spoke light-alloy wheels (style 437 M) in a Jet Black/Machined finish. The M2 also comes equipped as standard with M compound brakes that feature a fixed-caliper four piston front and two piston rear setup. These Nürburgring-tested brakes offer precise pedal feel, phenomenal stopping power, and very high resistance to fading. Their lightweight construction also helps in the reduction of unsprung weight.

Aesthetics - Paint, Upholstery, Trim

Positioned in M-exclusive Long Beach Blue Metallic, the all-new M2 is available in three alternative colours: Mineral Grey Metallic, Black Sapphire Metallic, and Alpine White.

Long Beach Blue Metallic

Mineral Grey Metallic

Black Sapphire Metallic

Alpine White

The interior of the all-new M2 features exclusive touches which clearly denote the performance orientation of the vehicle. Contrasting Polar Blue stitching adorns Black Dakota Leather which is further complemented by door inserts, gear lever (manual only) and handbrake boots finished in anthracite Alcantara. The lightweight performance ethos embodied by the M2 is highlighted by the exclusive open-pore carbon fibre trim that completes the interior.

Packaging and Content

The all-new M2 introduces unprecedented value and a more attainable entry level into BMW's M portfolio. Building on the well-rounded standard profile of the M235i, the M2 adds almost all packaged and standalone equipment available on the M235i to its own standard profile. This makes for an impressive near fully-loaded M vehicle at a starting MSRP of **\$61,000**. Optional equipment is limited to the M DCT Transmission (**\$3,900**), Convenience Telephony with Smartphone Connectivity (**\$600**), and Metallic Paint (**\$895**).
